Dan Turner, KHSI President

We've never been to an ASI (American Sheep Industry) convention before this year, so it was a treat for Jan and I to attend this year in Fort Worth. We joined ASI about the same time that we joined KHSI, but I never thought much about the activities of ASI, as I knew it was geared toward the US wool industry, and well, that's not us. Since it is ASI, and not AWI, the overall goal of the organization should be to promote sheep - which it is. As the US sheep industry is being promoted and strategies are being laid out for the future, the rise in popularity of hair sheep cannot be overlooked.

Another, not so subtle, fact that can't be overlooked, is that the ASI Executive Board now has 2 KHSI members who were elected to serve on the board. Lisa Weeks was reelected this year for Region II and Lynn Fahrmeier was elected to serve Region IV. There are 8 regions and KHSI members are serving in 25% of them. Admittedly ASI gets a good amount of funding from the Wool Trust, so much of the organization is wool-centric. That is not a bad thing, if that funding helps increase the awareness of the US sheep industry. High tides lift all boats, and hopefully momentum is gained enough that the sheep meat industry soon rivals the wool aspect.

There were over 420 attendees at the convention. At least 20 were KHSI members and I understand that this was 3-4 times more than normal. I've always wanted to go and as President of KHSI, it was the right thing to do. I was quite pleased that in almost every session I attended, the word "Katahdin" was mentioned in some positive way. Wow, we've come a long way. Some of the 51 presentations at the

convention covered genetic improvement, NSIP, resource management, Cache Valley Fever, upcoming drug laws, electronic identification, ALB (American Lamb Board), lamb grading and the lamb market outlook. The presentations were top-notch, though just as important are the topics covered in the question & answer periods of the presentations. Another highlight for KHSI was that Jim Morgan received a special recognition award during the Genetics Forum. Jim was promoting sheep genetics long before it was in vogue to do so. Jim also serves ASI as the Katahdin representative to the Genetic Stakeholders Committee.

Along with presentations were tours, dinners, receptions and a "trade show". KHSI was the only breed association to have a table display at the trade show. That seems a bit ironic, a hair breed being the only one displaying at ASI. There are several reasons why it was important for KHSI to do this. We are obviously getting noticed by ASI and it is good to show support for our members who serve on ASI. Not everyone raising wool sheep will keep doing this as they get older and as wool prices may decline further; but they want to raise sheep - we want to be there for them. Being in Texas, this was important for Katahdins to stand out, as Katahdins have a huge opportunity there.

I would like to say thanks to all those who attended and especially those that are making it a priority to serve the ASI board and committees. I was able to meet new people, make some good contacts and learn a lot of good info. I now have a wider network of contacts for information that I will someday reach out to, or at least spend time with next year in Denver.

But before Denver, I'm really looking forward to seeing all of you in Van Wert, Ohio!

ASI-Katahdin Story

by Kyle Partain – ASI Sheep Industry News Editor

As a hair sheep producer, you might wonder if you really need to be a member of the American Sheep Industry Association. After all, ASI is funded – in part – by the Wool Trust and empowered by those funds to market American wool both domestically and internationally.

With no wool to sell, what value does ASI hold for you and the Katahdin breed? After all, a percentage of your sales are already contributing to the American Lamb Board, which is the national checkoff program that operates separately from ASI. But did you know that as a national checkoff program, ALB is legally prohibited from lobbying on the industry's behalf?

Maybe you wonder about the importance of such lobbying efforts. Unlike beef or pork, lamb packages at grocery stores must be labeled for country of origin. This is mandatory and enforced by the U.S. Department

AMERICAN SHEEP INDUSTRY ASSOCIATION YOUR INDUSTRY ADVOCATE SINCE 1865

of Agriculture due to the efforts of ASI in the 2014 Farm Bill. Alone among livestock interests, ASI secured this mandate through the United States Congress. Sheep leaders also secured mandatory price reporting of lamb and are actively working to re-authorize that federal legislation this year. Imagine if lamb companies were allowed to pick and choose whether or what to report to USDA regarding purchases and sales. The sheep industry is also a leader in disease eradication and animal identification, with ASI establishing the No. 1 scrapie eradication program in the world. Our industry has nearly accomplished this goal, which cannot be said for any other sheep producing country in North America.

Or maybe you collected a portion of the \$156 million in Coronavirus Food Assistance Program funds that were made available to American sheep producers in the wake of the COVID-19 pandemic. ASI was at the forefront of providing USDA with the

documentation of losses at the ranch gate that was necessary for sheep producers to receive compensation from this vital program. But the work didn't stop when the CFAP program was announced. Originally, USDA planned to cover losses only on sheep 2 years of age and younger. But ASI and its state affiliates went back to USDA with additional information in early summer of 2020 and the department agreed to cover all sheep under the first round of CFAP funding. A second round of CFAP funding was announced in the fall of 2020 and covered all sheep.

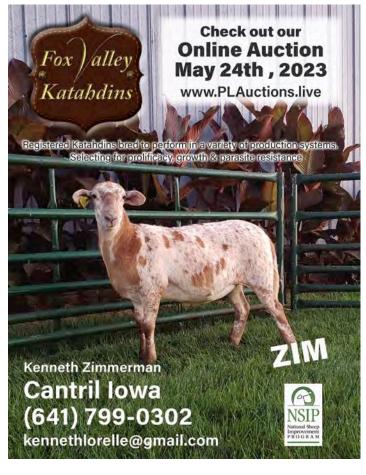

While CFAP funding can help put a monetary value on ASI's influence on behalf of the entire American sheep industry, it pales in comparison to the organization's value as a uniter of the industry.

"The value for me is being a part of the industry, and that's bigger than just my breed," said Lisa Weeks of Virginia, who is one of two Katahdin producers currently on the ASI Executive Board. "ASI gives our industry a seat at the table for our lobbying efforts."

For many producers – especially those with flocks of 200 ewes or less – the biggest value might be that in most states you become an ASI member by joining your state sheep association. And membership at the state level provides producers with access to an abundance of local resources and information.

"I've absolutely benefitted from my involvement with the Pennsylvania Sheep and Wool Growers Association," said Katahdin Hair Sheep International President Dan Turner, who attended his first ASI Annual Convention this year in Fort Worth, Texas. "I've met a lot of people and participated in countless programs in the state that have been very valuable to my operation. These state associations can provide education and experience geared toward your location.

"The reason I joined ASI is because I believe you should join the association that represents your industry,"

Turner continued. "Like some producers, there were times I felt like ASI was more geared toward wool. But I was impressed by how many Katahdin breeders I met at the convention this year. And now that I've been to the convention, I see that nobody has all of the answers to our problems. We need to work together, because we all want to see the sheep industry succeed."

Missouri Katahdin producer Lynn Fahrmeier was elected to the ASI Executive Board in January in Fort Worth and has been a longtime member of the association. As a first-generation sheep producer, he's always been open to working with any and all industry groups that could help his own operation thrive.

"Whether we raise wool sheep or hair sheep, we need ASI fighting for all of us," he said. "ASI is the political arm that represents everyone in our industry. ALB can't do that, but ASI can."

ASI also leads the push for Section 32 purchases of American lamb by USDA. At ASI's request, USDA has made several such purchases in recent years to help alleviate a backlog of frozen product. Such purchases reduce inventory and support the price of American lamb.

But ASI offers more than just lobbying to the industry. The ASI Annual Convention is the yearly gathering place for the entire industry, from the American Lamb Board to the National Sheep Industry Improvement Center to the National Sheep Improvement Program. And ASI had a hand in the creation of each of these industry advocates.

More so than producers in nearly any other American breed, Katahdin

producers have jumped on the genetics bandwagon that really took off through Let's Grow grants from ASI in the past decade. Those grants were a starting point for today's Sheep GEMS project headed by Dr. Ron Lewis of the University of Nebraska-Lincoln, and Katahdins are a major focus of the project. A huge involvement by the breed in NSIP and the fact that Katahdins are raised at three USDA Agricultural Research Stations - the U.S. Sheep Experiment Station, the U.S. Meat Animal Research Center and the Dale Bumpers Small Farms Research Center - that are now collaborating their sheep research efforts made the breed an ideal fit for the

The USSES might not even exist in 2023 had it not been for ASI's steady influence in getting the station removed from the government's closure list – a goal that was achieved in 2019.

ASI has also proven itself a leader in industry education through the annual convention, online webinars and materials available for download from SheepUSA.org. Educational programs and materials include:

- Sheep Safety and Quality Assurance.
- Secure Sheep and Wool Supply Plan.
- Sheep Production Handbook.
- Sheep Care Guide.
- Targeted Grazing Handbook (update coming soon).
- ASI's Research Update podcast.
- Sheep Industry News magazine.

In addition, ASI has worked collaboratively with USDA on the National Scrapie Eradication Program,

as well as with the Food and Drug Administration's Center for Veterinarian Medicine seeking approval of new drugs and dewormers for use in sheep. And as USDA looks to move livestock industries into the realm of electronic identification, ASI has worked to develop a transition program that will accommodate the best interests of the industry if/when the federal government moves forward.

"KHŠI has always been very education focused because a lot of our producers are first-time sheep producers and first-time farmers," Fahrmeier said. "They're buying Katahdins and need education on how to feed and raise these sheep. And ASI has a lot of materials that can be very useful for general sheep health and nutrition."

Finally, there's strength in numbers – which supports industry infrastructure that benefits all producers. As the domestic sheep flock continues to decline and the industry faces increased competition from imported lamb, we must come together as one voice for the betterment of all American sheep producers. And ASI – and its forerunner organizations the American Sheep Producers Council and the National Wool Growers Association – have been that united voice for nearly 160 years.

As the oldest national livestock organization in the United States, ASI has always put the interests of the American sheep producer front and center. But the association can't continue to do that without involvement from the entirety of the American sheep industry. So, whether you're producing Katahdins or Rambouillets, Dorpers of Targhees, there's a place – and a need – for you at ASI.

MINERALS, ARE YOUR SHEEP GETTING ENOUGH?

by Karen Kenagy

I see a lot of confusion about salt and mineral mixes.

Often people don't understand why their sheep eat a lot of one mix and don't seem to eat much of another.

The main reason is salt content.

Many trace mineral mixes are 75-98% salt so the sheep eat only a small amount which satisfies their hunger for salt. These mixes usually are low cost.

The higher cost mixes have more minerals and vitamins plus feed additives such as molasses or DSG that sheep love to encourage consumption of the less palliative minerals. These mixes contain only 10-20% salt and they're very tasty so sheep eat a lot more of them. They're also quite expensive compared to the mixes with a lot of salt. Almost all contain selenium which is lacking in the soils of much of the country.

The one mineral that sheep can self-regulate is salt. They crave it and seek it out but won't eat too much of it. The feed industry uses this craving, they combine minerals that sheep may not like with salt in the right amounts to make sure sheep get the important minerals they need, such as selenium to prevent white muscle disease. Lack of selenium also contributes to poor health and any problem can worsen when sheep are selenium deficit.

When feeding the more costly minerals people often supply a plain salt lick to save money. In his classes and books Woody Lane, PhD, calls this Double Trouble. Lick tubs, protein blocks and commercial feeds often contain salt which is another reason sheep may not eat enough of the mineral mix with selenium.

Sheep need a loose mineral, they can't get enough from a block and it's hard on their teeth.

By sending in a small portion of liver when you butcher you can have an analysis done which will tell you the levels of minerals in the sample. I was surprised to find out that my sheep were low in copper, so I've adjusted the mineral mix I feed, yes, sheep do need some copper.

Your sheep may or may not need the mixes with more additives depending on the rest of their diet. You can also send in samples of hay or pasture for analysis.

I hope this helps you understand why sheep eat a lot of some salt/mineral mixes and very little of others. Think about all the other sources of salt that your sheep may have access to. Sometimes it doesn't take a big change to improve the health and success of you flock.

For more information you can get Woody Lane's book "From the Feed Trough" KRK

Ringwomb: Causes and Treatments

David S. Redwine, DVM

I'm not sure that I ever heard the term "Ringwomb" during my vet school years. But it didn't take long in actual private practice, for me to learn more than I wanted to know about this dreaded sheep problem. Working on small ruminants in rural Virginia during the 80's, and without anyone to ask or rely on, I learned to be decisive and creative in my attempts to save my patients.

The term is actually a misnomer, with the "womb" or uterus, actually normal in these ewes. Ringwomb refers to the lack of, or incomplete dilation of the cervix, or birth canal, in ewes and ewe lambs. It occurs as a result of the failure of the cervix to respond to the hormone change responsible for delivery, or a lack of these hormones at all in the ewe. The latter condition can result in ewe going past their due date by a week or more. While it can happen to all ages of ewes, I personally have seen it mostly in ewe lambs and young adult ewes.

involves the presence of fetal membranes hanging from the vulva, with no contractions or delivery of lambs within two hours. Examination of the ewe reveals a birth canal that is only open large enough to get one or two fingers through. There may or may not be rupture of the amniotic sac, and loss of fluid, which mandates the delivery of lambs if they are expected to survive.

Once a diagnosis is made, owners must quickly make a decision on treatment based on a number of factors. Willingness to invest in a C-section, availability of an experienced veterinarian, value of the lambs and ewe, and predicted outcome, all factor into the decision.

I will cover three possible approaches used in my practice. C-section of the ewe yields the best possibility of both lives lambs, and the ewe. It should be done as soon as possible, to avoid death of lambs, and requires a larger investment.

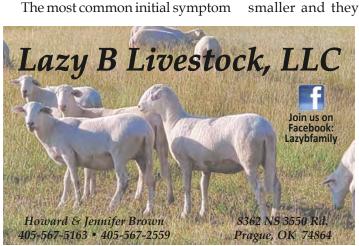

The second and most common treatment involves manual dilation

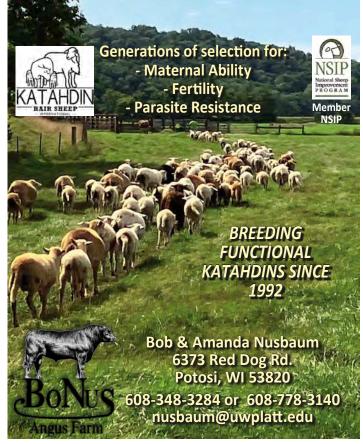

of the cervix by gently stretching it with your fingers. This may take several hours for the tissue to soften and relax, and you risk tearing the birth canal and damaging or killing the ewe by hemorrhage. Women seem to be the best midwives as their hands are smaller and they

have better dexterity in their fingers. Most Katahdin lambs can be delivered through a cervix large enough to pass a human hand through.

The third treatment option is reserved for situations where the lambs are dead, or the primary goal is to save the adult ewe. I have had success with injecting ewes with a combination of Dexamethasone, Lutalyse, and Oxytocin (two mls of each) and rechecking the ewe in 24 hours. Most of these ewes can be successfully relieved, with little or no manual dilation, but the lambs are usually dead by the time they are delivered.

Ewes should receive Banamine and antibiotics postpartum, and may require supportive care for a few days. Surprisingly, I have found these ewes to deliver normally during following years, and go on to lead productive lives. Hopefully this article will help you recognize this problem, and make decisions that will best benefit your animals and your program. Good luck!

We had over 100 lambs born in January and February sired by these rams

Exhibited the Reserve Champion All Other Meat Breeds Ram and Ewe and was named Champion Breeders Flock at The 2021 Ohio State Fair

BLZ 147

SHU 4448
"White Christmas"

BMS 030

When starting the flock in 2011 we both worked regular full time jobs so a focus on sheep that worked for us and not the other way around was a must. We still select for this today and cull animals that cannot perform in our generally hands off system. We also enjoy watching our animals when in the barn daily so it is important that they maintain eye appeal and correctness along with the production. We have had great success exhibiting at The Ohio State and Hartford Independent Fairs. We look forward to getting out to more shows and sales in the future.

Weight data will be collected on these lambs for submission to NSIP and we will have a limited number available for sale off the farm this summer.

We also have a great group of yearling rams available on the farm and for consignment to the EAPK and EXPO sales in 2023.

Our ewe flock has been built with ewes selected from BAG, BET, CAG, BMS, ELR, LLG, SHU, SRS, TRB, WHK and the ULRY ewes upgraded from our original commercial flock.

Submitted through NSIP for "Genomically Enhaced" Breeding Values yields results for the following genetic conditions.

Canatia Canditions Posults Kov

PROGRAM			Genetic Conditions Results Key							
Scrapie Susceptibility			Scrapie is a degenerative disease affecting the central nervous system,							
Codon 136	Codon 171	Description	which can be debilitating to a flock. Once an animal is infected there is no							
AA	RR	Complete Resistance	reatment. Infected animals typically do not show symptoms until two to rive years after the initial infection. After the onset of symptoms, animals rend to live only one to six more months. Symptoms include nervousness or aggression, obsessive rubbing, incoordination, and tremors. Because of the delay between infection and onset, control of this disease within a							
AA	QR	Rarely Susceptible	flock by signs and symptoms alone is ineffective. The ability to manage a flock using genetics has made it increasingly easier to prevent Scrapie. Two locations on DNA that code for prion protein are particularly important for classical scrapie susceptibility: Codons 136 and 171. Codon 136 codes for the amino acids alanine (A) or valine (V). Codon 171 codes for the amino acids arginine (R), glutamine (Q), histidine (H), or lysine (K). The effects of H and K relative to Q and R at codon 171 on scrapie susceptibility have not been documented. Therefore, for selection purposes, consider them as equivalent to Q.							
AV	QR	Somewhat Susceptible								
vv	VV QQ* Susceptible		Animals with the AA at Codon 136 and RR at Codon 171 are completely resistant to the disease. This means that while other animals in the flock may have the disease, these animals will never be infected. Any animal with the QQ at Codon 171 will be susceptible to Scrapie, while other codon combinations grant varying levels of partial resistance.							
*Animals QQ at	codon 171 regardl	ess of their genotype at	don combinations grant varying levels of partial resistance.							

GENETIC CONDITIONS CONTINUED FROM PG 9

OPP Susceptibility (TMEM154)		Ovine Progressive Pneumonia (OPP; also known as Maedi Visna outside the US) is an
Diplotype Results	Description	infectious disease of sheep caused by the OPP virus, a very slow growing Small Ruminant Lentivirus. The disease is eventually fatal. The most prevalent signs are general
1, 1 or 4, 4 or 1, 4	Less Susceptible (desirable)	wasting ('thin ewe syndrome'), decreasing milk production ('hard bag syndrome'), and pneumonia unresponsive to treatment, with labored breathing, exercise intolerance and coughing. Symptoms are usually not apparent until later in life so the infection status can only be determined by testing. Depending on the incidence of OPP in the flock, production losses can be significant. There is no known treatment, and no vaccines are available. Variable degrees of natural resistance to infection exist and can be determined by genetic testing (TMEM154 test). Selecting replacement breeding animals carrying desirable genotypes can help decrease susceptibility to OPP in the flock. The four most common genetic haplotypes (one inherited from the sire, one from the
*, 2 or *, 3	Highly Susceptible	dam) are denoted 1, 2, 3 and 4. Haplotypes shown to confer less susceptibility are 1 and 4. Therefore, diplotypes 1,1, 1,4 and 4,4 are desirable when selecting animals for breeding, while haplotypes 2 and 3 (even in combination with desirable haplotypes) indicate high susceptibility and are not desirable. We recommend that producers increase the frequency of haplotype 1. If producers have access to replacement animals with haplotype 4, it can be selected at the expense of haplotypes 2 and 3 but not at the expense of haplotype 1. The rationale for the last recommendation is that haplotype 1 was as effective as haplotype 4, yet only one amino acid different from the ancestral protein sequence. Thus, haplotype 1 has the best chance at retaining the natural function of the TMEM154 gene, which is pres-
Other haplo- types and their combinations	Unknown	ently unknown. Regardless of TMEM154 diplotype distribution, adult sheep in infected flocks should be periodically tested for antibodies against the virus (serological prevalence) starting with the oldest animals first. A blood test that detects the presence of antibodies against the virus can be used for this (for example ELISA tests from IDEXX or VMRD). A reduction in OPP prevalence can be achieved by simultaneously selecting less susceptible animals for breeding while removing seropositive animals from the flock.

Myostatin		
Results	Description	
Noncarrier	No Copies of Mutation	
Carrier	1 Copy of Mutation	
Homozygous Myostatin	2 Copies of Mutation	

The function of the normal myostatin gene is to keep muscle growth in check. A mutation in this gene, which originated in Texel sheep, reduces its function with increases in muscle growth and fiber numbers during early fetal development. Each additional copy of the myostatin variant acts in an additive manner by decreasing carcass fat while increasing carcass muscle. Meat quality is not significantly affected. Lambing ease is also not affected in litters with multiple lambs. Moreover, any differences in dystocia were not repeatably detected when US Texel sires were used in terminal crosses with different breeds.

Callipyge		
Results	Description	
Noncarrier	No Copies of Mutation	
Carrier	1 Copy of Mutation	
Homozygous CLPG	2 Copies of Mutation	

The causative mutation for this condition occurred in a single Dorset ram and has dramatic effects on muscle development. The genetic locus was given the descriptive name Callipyge (CLPG), derived from Greek for 'beautiful buttocks'. The phenotype is characterized by extreme muscle development due to hypertrophy during early postnatal (three to eight weeks of age) growth. Despite large effects of this hypertrophy condition on slaughter and carcass composition traits, the associated adverse effects on meat quality traits have deemed this a mutation to eliminate for the good of the US sheep industry.

the good of the US sheep industry.

Due to the unusual inheritance of the Callipyge phenotype, it is important to realize the genetic testing will identify the number of copies of the mutation but will not predict the phenotype without additional parental status information. Regardless, the test can be used to eliminate this mutation from the desired populations.

Booroola FecB		
Results	Description	
Noncarrier	No Copies of Mutation	
Carrier	1 Copy of Mutation	
Homozygous FecB	2 Copies of Mutation	

The Booroola fecundity gene (FecB) variant is inherited as a single autosomal locus influencing ovulation rate and litter size. The effect of FecB is additive for ovulation rate. That means for each copy of FecB variant inherited, there will be an increase of about 1.6 corpora lutea per cycle. Multiple researchers identified the causative mutation within the bone morphogenetic protein IB (BMP-IB) receptor. These teams found that Booroola sheep had a mutation (Q249R) in the highly conserved intracellular kinase signaling domain of the BMP-IB receptor.

Selection for multiple copies of this fecundity mutation can cause large increases in ovulation rate and litter size. Such impacts on the existing production system need to be considered before incorporating the FecB mutation into a flock.

INCONCLUSIVE TEST

In some cases, the result of a genotype test will be inconclusive. There are redundancies built into the testing process to validate a test. When there is a level of inconsistency among those redundant tests, the genotype call is less reliable and therefore deemed inconclusive. Such inconsistency can arise from the condition of a tissue sample, the extraction of the DNA from a sample, and the complexity of the chemistry associated with each test. If a test is inconclusive, and a reliable genotype on an animal is needed

for marketing or selection decisions, a new tissue sample should be collected and submitted for retesting.

GENETIC CONDITIONS RESULTS IMPORTANT NOTICE (DISCLAIMER)

PARENTAGE RESULTS

The parentage results in this report are based on methodology developed by Sheep CRC Ltd and further refined by Sheep Genetics and its service provider (AGBU) which enables allocation of the pedigree of animals from the list of supplied candidate parents.

POLL RESULTS

The Poll test results are a predictive breeding value for poll status that has been based on Sheep CRC Ltd research and data from the Information Nucleus program.

This test is not the direct marker or the actual gene causing poll status, which means that the outcome of the test is not 100% accurate. There is a 3% chance that a "PP" sire will produce horned progeny. However, sires with

the "PP" genotype will produce significantly more offspring with polled status than sires with a "PH" genotype or "HH" genotype.

Animals recorded with Sheep Genetics will also have their poll result included in the Sheep Genetics databases.

GENETIC CONDITIONS AND

RECESSIVE GENES

The genetic condition and recessive gene tests are based on published information about Single Nucleotide Polymorphisms responsible for specific conditions.

GENERAL

While the Sheep Genetics, Meat & Livestock Australia Ltd (MLA), Animal Breeding and Genetics Unit (AGBU), and National Sheep Improvement Program (NSIP) have taken all reasonable care to ensure our methodologies are valid and results are accurate, you should be aware that genomic testing and methodologies have inherent inaccuracies which, in some cases, cause inaccuracies in the genomic results and our recommendations.

In addition, the samples and infor-

mation used to prepare this report are obtained from various parties. Neither Sheep Genetics, MLA, AGBU nor NSIP can or do verify this information and any inaccuracies in it will impact the accuracy of the results (e.g., genotypes assigned to the wrong animal can result in misleading results).

Please also be aware that the results and recommendations in this report do not consider your specific business interests and circumstances. You should check these against your/the breeder's records to verify that any suggested pedigree allocations are possible. You should also make any other relevant inquiries and consider the inherent inaccuracies of genomic testing and methodologies before making decisions concerning your interests or otherwise relying on these reports in any way.

To the extent permitted by law, this report is provided 'as is', and the Sheep Genetics, MLA, AGBU and NSIP expressly exclude all rights,

warranties, and guarantees regarding the completeness or accuracy of the information in this report.

Kiefer Sheep Farm CEK

Showcasing our Riviera stud rams this edition! Four of these guys sired our 2022-23 lambs and are going to be used this coming year as well! We've also added an "Equalizer" son - "Moving On" to the flock. We're excited to use him this year!

RIV 850 "Long Fellow"

We've leased this massive stud ram from the Larrick Family (Dry Creek Dorpers/Katahdins). He's thrown some great lambs. Some will be available at this year's sales!

R/V 851

"Long Distance"

Son of Riviera "Long Genes" and sire to "Equalizer". We've kept back a super set of females out of him.

RIV 939 " "Mean Gene"

A Riviera "Gunslinger" son Champion Ram at the 2021
MWSRS and half brother to
our Supreme Champion Ewe
at the NAILE. We've kept a
couple of awesome fall
females out of him and we'll
be using him a lot more this
year!

RIV 937 "Freako"

A Riviera "G-Man" son. Love the way his lambs look. Our NAILE Supreme Champion Ewe - "First Lady" will be bred to this ram, plus many others!

RIV 995 "Moving On"

Our new Riviera stud ram. Sired by "Equalizer" - 2022 Champion Ram at the MWSRS Chad & Elizabeth Kiefer 10689 State Highway 72 Patton, MO 63662 Elizabeth: 573-944-3498 Chad: 573-712-8940 kiefersheepfarm@gmail.com We plan to hit the road for the following show/sales. Look for our sheep at:

Katahdin Expo & Sale Goes to Van Wert, OH

Welcome to Van Wert, OH for the 2023 Katahdin Expo.

It promises to be another huge success. Van Wert is located in northwestern Ohio approximately 77 mi SW of Toledo and 34 mi SE of Fort Wayne, Indiana. The event will be held at the Van Wert County fairgrounds.

Mark your calendars for the 2023 Expo, August 10-12,2023, in Van Wert Ohio. The Expo committee is developing a program with something for everyone. Thursday's program will feature on-the-farm demonstration of grazing cover crops, a demonstration of Advantage feeders and evaluation of live lambs.

Friday will consist of three tracks of concurrent sessions on a wide variety of topics. Our goal is to have educational session for the beginning and experienced shepherds. Speakers will be Dr. Brady Campbell, Dr. Dave Notter, Christine Gelley, Lynn Fahrmeier,

Bob Hendershot, Dr. Eric Gordon, Alan Culham and Doug Brooks

Expected Topics

- FAMACHA training
- Intro to basic NSIP
- GEMS/Genomics
- Forages & grazing
- Selecting traits using NSIP
- Haircoat inspection training
- Finishing lambs on grass
- Foot health
- Selection lambs for specific markets
 - Genotype vs. phenotype
 - Solar grazing

Producer Panels:

- 1) Building a breeding program for your market and
- 2) Production a good animal with good numbers

Friday will conclude with the annual KHSI membership meeting, dinner and an ice cream social. The 2023 Expo will conclude with the sale on Saturday at 11:00 AM. Vendors will

be present each day with a variety of small ruminant and livestock products and equipment

Very important that you make your reservations as soon as possible and mentions "Katahdin Sheep" or "sheep expo". They will hold them up till 3 weeks before Expo. You can always cancel your reservation if needed later. Be sure to call each hotel directly for rates not thru online website.

All-American Junior Show

The 2023 All-American Junior Sheep Show is going to be held at the Alliant Energy Center, Madison, WI from June 29-July 2, 2023. This will be the second time the All American has visited Wisconsin in Madison and we are looking forward to bringing the show back to Dane County where we hosted a very large event six years ago, and are planning on another big one! Whenever the AAJS is centrally located, where folks can come from coast to coast, you can count on it being a great gathering of junior breeding sheep families from all over the country.

The All-American is the premier and largest junior breeding sheep show in the country. The breeds participating this year are: Polled Dorsets-Fitted & Slick Shorn, Horned Dorsets, Dorset Advantage, Hampshires-Fitted & Slick Shorn, Southdowns, Border Leicesters-White & Natural Colored,

2023 All-American Junior Show

Cheviots, Cotswolds, Shropshires, Oxfords, Montadales, Romneys-White & Natural Colored, Shetlands, Lincolns-White & Natural Colored, Natural Coloreds, North Country Cheviots, Rambouillets, Targhees, Texels, Tunis, Dorpers, White Dorpers, Columbias, Corriedales, Katahdins, Merinos, Babydoll Southdowns and Suffolks-Fitted & Slick Shorn. Polled Dorsets, Hampshires and Suffolks now have two completely separate shows for Fitted and Slick Shorns, while Lincolns, Romneys and Border Leicesters feature two separate breed shows for the white and natural colored sheep. Judges for this year's event will be Skip Anderson, ND; Brad Ellerbrock, IL; and Randell VonKrosigk, SD. The National Junior Southdown Show, National Junior Tunis Show, and the United National Junior Suffolk Show will be held in conjunction with the All American Junior show this year. Also, new this year the Romney breed will be having their National Junior Romney Show at the All American. Thank you to all of the National Breed Associations and their breeders for

their continued special sponsorship of this show!

If you have never attended an All-American Junior Show please make plans to attend this very special event! It is much more than just a sheep show, as there are several activities for the whole family. The show features a lamb camp for young sheep owners, a Wisconsin Corn Hole tourney for exhibitors, a fun Ag Olympics social event, a sheep skil-a-thon competition with several participation awards being sponsored, a sheep judging contest, free complimentary food service for exhibitors and their families, individual and team showmanship competitions, wool show, promotional contests featuring a NEW social media video category for exhibitors and an adult age photo division, a college scholarship program for older exhibitors, a thank-you note writing booth where participation awards are given away, a fun virtual shearing contest with an adult division, and a

lead line and dress-a-sheep competition, plus much more!

This will be the second year of the Supreme Champion Ram and Ewe drive on Sunday afternoon after the breed shows are completed and prior to the closing ceremonies. The AAJS is planning some very special awards for our winners! Also, we want to remind everyone of the implementation of a minimum age limit of 4 years old by January 1st for a junior exhibitor to enter the breeding sheep or market lamb classes. Younger exhibitors are still more than welcome to participate in showmanship classes, lead line and dress-a-sheep contests, attend lamb camp, assist older exhibitors in the breeding sheep show rings and participate in all of the promotional contests and other fun activities associated with the show.

The All American extended the show schedule by a half day four years ago and will continue to do so this year as it worked out very well for all of the attendees and staff. Sheep need to arrive by Thursday, June 29th at noon as all check-in will take place

on Thursday. Activities actually start Thursday afternoon with the Judging Contest, Fitting Demos, Lamb Camp and Leadline & Dress-A-Sheep Contests.

The Opening Ceremonies will kick things off on Friday morning, July 1st followed by Showmanship Classes and some Breed Shows. On Friday night there will be the Wisconsin Corn Hole tournament and the Harry & Mary Blome pizza party starting at 6:00 pm right on the show site. There will be a tailgate dinner on Saturday night along with the Ag Olympics taking place for exhibitors, with prizes given out. Come and enjoy the family fun!

Entries close: MAY 25th, 2023

There will be a higher entry fee for any late entries submitted after the deadline date and post entries at the show. Check out the All-American Website:

FUNDRAISING

The All-American Junior Show Committee has four major fundraising activities that are held to help raise funding for this special junior show. Following is information on these activities and the show would certainly appreciate your support in these fundraising efforts:

AAJS RAM SEMEN ONLINE BENEFIT AUCTION

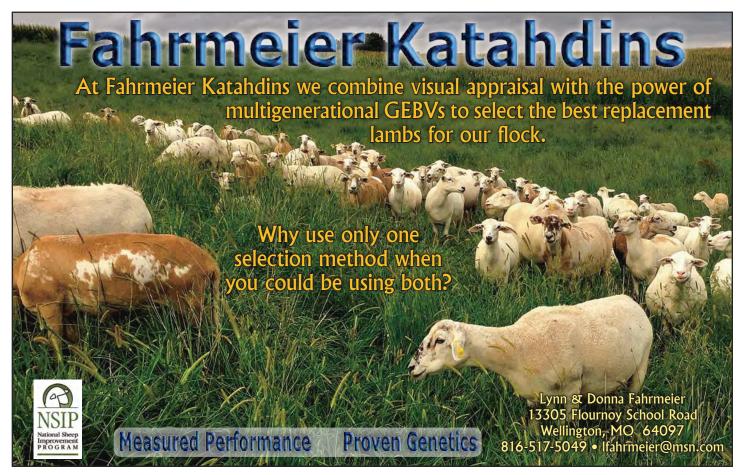

Sale will be held on May 15, 2023 on Integrity Livestock Online Sale Site at: www.integritylivestocksales.com

Please support this major fundraising event by bidding on semen lots, and some specialty items will also be offered.

All proceeds will go directly towards the All American Junior Show.

ALL-AMERICAN GIFT BASKET & SPECIALTY ITEM SILENT AUCTION

Gift Baskets and specialty items will be on display during the duration of the All-American Junior Show for bidding. Bidding will close on Sunday, July 2nd at noon. Basket and item donations would be greatly ap-

KHSI Board Meeting Minutes

DECEMBER 15, 2022

President Dan Turner called the meeting to order at 8:02 PM EST.

Board members present: Dan Turner, Howard Covington, Karen Kenagy, Cindy DeOrnellis, Larry Weeks, Justin Fruechte and Mandy Fletcher. Alan Culham was also present.

Dan asked the board to review the minutes from November 17, 2022. Cindy moved the minutes be accepted. Howard seconded the motion and it passed. The November minutes were accepted.

Alan presented the treasurer's report which also included the year-to-date profit & loss and the balance sheet. Alan also provided the November registration and membership report.

OLD BUSINESS

NSIP COMMITTEE - DAN

Dan reported that the committee is finalizing the last documents, including the spreadsheet for the reimbursable grants and GEMS projects. Reimbursement criteria was discussed.

Hairald Back Cover Auction - Alan

Alan discussed using PL Auctions and setting a \$500 minimum bid per ad for the back cover of the Hairald. Larry made the motion and Cindy seconded to auction the back cover of the Hairald for all 4 (four) future editions (3 editions in 2023 and 1 edition for the winter of 2024).

KHSI PHOTO CONTEST - ALAN

Alan reported that judging had been completed and will be posted on our website. Winners will be published in the next issue of the Hairald.

New Business

Color on registration papers - Alan

Alan discussed the letter received from a member who requested that color be included in the registration of an animal. The board determined that color is not an economically important trait and the variety of colors would make this difficult. It was noted that when promoting animals, a photo can suffice for showing color.

ELECTRONIC VOTING - DAN

Dan informed the board of his

research with a third- party service provider for electronic voting options. The consensus of the board was to continue to use the standard system that is currently in place for voting.

WEBSITE FUNCTIONALITY - DAN

Dan reported that the website is mostly operational but is still being updated. There are substantial dead links to pdf files. The website work group will fix the information within important links and place them where they belong.

2023 BUDGET

The budget was reviewed, modifications were made, and it was adopted by the board.

Email from Katahdin producer - Larry

Larry informed the board that he received an email from a Katahdin producer who is concerned about the Hairald not being received in a timely manner. Alan stated that he would check on this issue with the publisher.

Larry moved to adjourn the meeting and move into Executive Session. Howard seconded the motion. The motion passed and Dan adjourned the meeting at 9:09 PM EST.

A motion was made by Larry and Cindy, unanimously, to end Executive Session and reconvene into the Regular Meeting Session at 9:18 PM EST.

REGULAR MEETING SESSION - DAN

Next meeting: January 26th @ 8 PM EST

No further discussions came before the board. The meeting adjourned at 9:23 PM EST. (Justin made the motion and Larry seconded).

JANUARY 26, 2023

President Dan Turner called the meeting to order at 8:00 PM EST.

Board members present: Dan Turner, Howard Covington, Larry Weeks, Cindy DeOrnellis, Karen Kenagy & Justin Fruechte. Mandy was not present. Alan Culham was also present.

Minutes were reviewed and Justin move to approve. Howard seconded the motion and motion passed 6-0. Board reviewed treasurer's reports that included end of year summaries. 2022 was second highest year for registrations and transfers. Memberships

are at an all-time high.

OLD BUSINESS

NSIP COMMITTEE REPORT - DAN

Reimbursement process for genotype and GEMS submissions is progressing and should begin in early February. Michelle Canfield, Tom Hodgeman and Dr. Ron Lewis developed the process that will reimburse \$10 each for qualifying genoype and GEMS samples submitted. Dr. Lewis will verify the submissions and Alan will write the reimbursement checks, estimated at app. \$30,000 total.

Dan attended the NSIIC committee meeting while at the ASI convention and thanked the committee for the grant received by KHSI.

AUCTION OF HAIRALD BACK COVER - ALAN

Scheduled for Feb. 15 with PLAuctions. Will publicize with ad in upcoming Hairald, email blasts, web page notice and Facebook posts.

HAIRALD COMMITTEE REPORT - JUSTIN

First goal of the committee is to assess the needs/goals of the committee. Ad rates will likely be increased next year. Goal is to keep content diverse to meet the needs of KHSI's diverse membership. Britton Francis will provide leadership for a new "Ask the Expert" column. Justin suggested a brief survey for suggested topics/articles at the next Expo. Karen also participated in the meeting. The last issue of the Hairald was late in arriving due to printing complications. Alan and Gail visited with the publisher about providing more timely delivery. The online version will be posted as soon as available to alleviate late arrival by USPS mail.

HONORARY MEMBERS - DAN

At the December meeting, a written recommendation was presented to make Dr. Notter and honorary member. Howard Covington asked that Mark Dennis also be considered. The board agreed that a formal process needs to be developed for future nominations. Larry moved to recognize Dr. Notter and Mark Dennis as honorary members. Howard seconded the motion and it passed 6-0.

KHSI MERCHANDISE SALES – HOWARD

Howard noted that present policy states that those selling official KHSI merchandise must send 25% to KHSI. Alan has not received any commissions in the last couple years. The logo is provided for use of members at no charge. Larry moved that "sheepthings.com" be assessed no commission when marketing KHSI promotional wear and materials. Howard seconded the motion and it passed 6-0.

EXPO COMMITTEE REPORT - CINDY

The Expo date is August 3-5, 2023, at Van Wert, OH. Ron Young is cochairing the committee. Kathy Bielek will also join the committee as she has knowledge of speakers and topics available in the state. Speakers are being contacted to speak on a variety of topics.

Howard asked about compensation for those who helped with the Expo event and sale. Policy states that a free membership is offered to those who have worked at least 4 hours, pending confirmation by the

operations manager. Howard noted that there are several members who work much more than 4 hours. Larry moved that deserving sale staff designated by operations manager and sale manager receive compensation of free registration to the Expo and hotel. Howard seconded the motion and motion passed 6-0.

Dan suggested Expo staff wear matching shirts or caps so attendees know who to approach for directions/questions. He also suggested holding a Silent Auction to benefit the scholarship fund or youth committee. Those suggestions will be relayed to the committee.

KAT+ COMMITTEE - HOWARD

Board discussed several suggestions resulting from the committee's last meeting. Cindy moved KHSI support an online sale for Kat+ replacement ewes. Justin seconded the motion and motion passed 6-0. In 2023, sale will be held with PLAuctions in May. Lots must be at least 10 head.

Cindy moved that Kat+ requirements be changed to state that Kat+

ewes must have a registered sire or dam. Howard seconded the motion and motion passed 6-0. Previous rule stated that Kat+ ewes must be sired by a registered ram.

New Business

SCKA KREG GRANT APPLICATION

Larry moved to approve the grant application and Howard seconded the motion. Motion passed 6-0. The grant will help fund a field day in Texas.

ASI CONVENTION - DAN

KHSI was well represented and Lisa Weeks and Lynn Fahrmeier are regional directors that were chosen to serve on the executive boad.

Larry moved the board go into closed session and Justin seconded the motion. Motion passed 6-0. Howard moved to return to open session. Larry seconded the motion and motion passed 6-0.

Discussion in closed session was that Alan and Jeff Ebert's contracts will expire in 2025. Need to review

contracts and determine how to avoid both contracts terminating in same year.

Next Meeting – February 23 @ 8:00 PM EST

Larry moved to adjourn and Cindy seconded the motion. Motion passed 6-0 and Dan adjourned the meeting at 9:45 PM EST.

February 23, 2023

President Dan Turner called the meeting to order at 8:00 PM EST.

Board members present: Dan Turner, Howard Covington, Larry Weeks, Cindy DeOrnellis, Karen Kenagy, Justin Fruechte, and Mandy Fletcher. Alan Culham was also present.

Minutes were reviewed and Howard moved to approve. Justin seconded the motion and motion passed 6-0. Board reviewed treasurer's reports that included end of year summaries. Alan also provided the January registration and membership report.

OLD BUSINESS

NSIP COMMITTEE REPORT - DAN

Reimbursement process for genotype and GEMS submissions is progressing and the committee ran a test-trial. Michelle Canfield, Tom Hodgeman and Dr. Ron Lewis developed the process that will include reimbursement forms - \$10 each for qualifying gentoype and GEMS samples submitted. The online database is not showing the updated information at this time, but the committee is working to resolve this and continue to move forward.

HAIRALD BACK COVER AUCTION - ALAN

Done Feb. 15 with PLAuctions. Publicized with ad in the latest Hairald, email blasts, web page notice and Facebook posts. Several members purchased back cover advertising. The decision was made to continue with auctioning the back cover only at this time.

KHSI HONORARY MEMBERS - ALAN

Alan spoke with Dr. Notter and he confirmed that will attend the 2023 expo event, and be recognized as an honorary member. Howard Covington confirmed with Mark Dennis as well, and he was pleased to accept.

Alan made a suggestion that KHSI pay for hotel stays of the honorary members for a night or two during the expo. Further discussion will occur.

EXPO COMMITTEE REPORT - CINDY

The planning committee is moving forward with the Expo details. Speakers are still being contacted to speak on the variety of topics. A tentative agenda is set.

Larry suggested that Dave Knotter speak at the Expo.

Cindy suggested that an NSIP for Beginners workshop be held, along with a hands-on-workshop. These suggestions will be relayed to the committee.

Questions have been asked about videoing sessions to be posted on our website.

Kat+ Committee & Sale -Alan & Justin

On May 24, 2023, the sale will be held with PLAuctions. Lots must be at least 10 head.

The committee evaluated that Kat+

requirements be changed to state that Kat+ ewes must have a registered sire or dam. Previous rule stated that Kat+ ewes must be sired by a registered ram. The board adopted these new requirements at the January 2023 meeting. There has been lots of interest from new members. The committee will continue to make final plans and move forward. Expect an email blast in the next while.

NEW BUSINESS

KHSI Scholarship - Alan

The committee recommended that the application include the addition of accepting attendance to a technical school, since several of those institutions are adding animal science. Alan will make the above addition. The board was informed that the scholarship application will be in the Hairald, on Facebook, and the website. Scholarship deadline is set for July 1, 2023.

KREG GRANT QUESTION - HOWARD

The question was raised about what happens if a field day gets

larger – meaning a greater number of event registrations – than what was anticipated and what this means for the funds allocated. Board discussions were to continue to encourage grant applicants and relay that funding is available. It was suggested that the applicant indicate what the anticipated amount of funding is. An increase of funding should be based on increased attendance only. Larry suggested that the initial plan that comes to the board include the total expected, along with those that may walk in without registering ahead of time.

PAST DUE ACCOUNTS - HOWARD

Discussions were had about certain registration paperwork complications between breeders and buyers, and examples were given. This problem involves a small claims issue between the buyer and seller. This brought up further discussions by the board about dealing with past due accounts. Ideas of keeping accounts and membership up to date and paid were suggested

and will be revisited at a later time.

KATAHDIN GENETIC STAKEHOLDERS Rep. - Dan

The board will develop a letter to submit to ASI to recommend a genetic stakeholders representative. Further discussions will occur.

ASI FUNDING - DAN

Lisa Weeks and Lynn Fahrmeier are regional directors that were chosen to serve on the executive board of ASI. Alan noted that KHSI is receiving increased attention with ASI. Larry made a motion that KHSI become a bronze level partner with ASI at \$2500.00. The motion did not pass. Discussions were held and the board requested we revisit this at our March meeting.

Next Meeting - March 23 @ 8:00 PM EST

Howard moved to adjourn and Justin seconded the motion. Motion passed 6-0 and Dan adjourned the meeting at 9:30 PM EST.

Visit the KHSI website: https://katandins.org check the calendar for events, review past issues of the Hairald, online membership directory & registration and much more!

KAT Plus Online Replacement Ewe Sale Rules

Eligible to ewes produced through the KHSI Kat Plus Program

Flocks enrolled in the program are required to:

- Must be a KHSI member in good standing
- Ewes must be sired by a registered Katahdin ram owned by participant and recorded by such with the KHSI registry or ewes must be dammed by a registered Katahdin ewe owned by participant and recorded by such with the KHSI registry. Either way at least one parent must be a registered Katahdin.
- Must be enrolled in the Katahdin replacement ewe program
- KHSI registered flocks can self-enroll in program
- Commercial flocks may be enrolled by seller of registered ram or can enroll themselves if they breed to a registered ram.

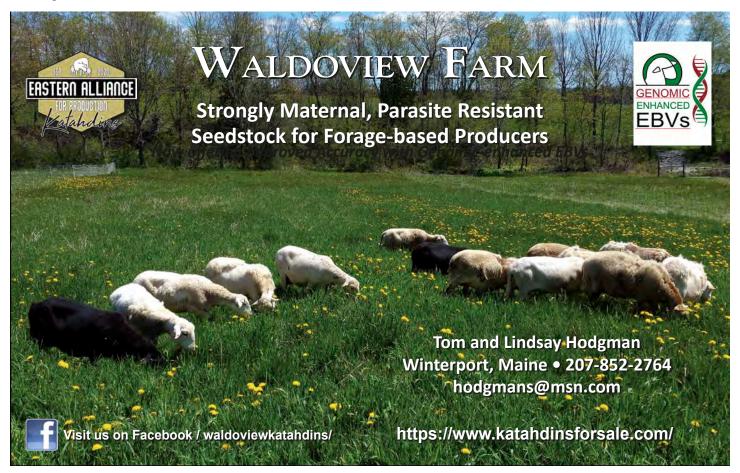

- Contact: info@katahdins.org to enroll flock
- Sire of ewes need not be identified but is encouraged to aid merchandizing by:
- Allowing resulting ewes to enter the KHSI "upgrading" program
- Identification of NSIP sires will allow some prediction of daughter's potential performance levels by use of sire's genetic evaluations.
- Size of offering: Minimum of ten ewes

flock at cost of \$1.00 per tag.

Katahdin Plus Online Replacement Ewe Sale will be managed by Production Livestock Auctions (PLA). 4% Commission will be charged from which 0.5% will go to KHSI as the sale sponsor. No charge will be accessed for "no sales". Consignments will have a minimum lot size of 10 head. Larger consignments (up to 50 head per lot are encouraged). Sale terms of delivery will be established by the consignor to reflect ewe availability. Buyer is responsible for transportation costs. All ewes sold in this sale must be tagged with the official KHSI Kat Plus tag.

Contact KHSI operations to place entries. info@katahdins.org

Hair Coat Inspection is Here

by Howard Covington -Haircoat Video Inspection Committee Chairman

Well we made it through winter and spring is in the air. Starting May first through September 30th will be time for those of us that need to do hair coat inspections to start inspecting.

The first thing I would like to remind everyone is that if you have been a KHSI member for one year how you can call or email Alan at operations. He will send you a link to the hair coat inspection test and you take the

test at home and then email the results back. If you pass the test then you can inspect your own sheep.

For those of you that haven't been a member for one year or don't want to take the test then you will have to do a Virtual Video inspection. We have a good video on how to make a video and written information on how to. If you are going to do a video and send it in to the judges then go over this information a couple of times. We will only give two do overs per animal. If you don't get it right then you have to

wait till next year.

KHSI has all the information on our new website for the Hair Coat Inspections. Click on Programs on the new web site.

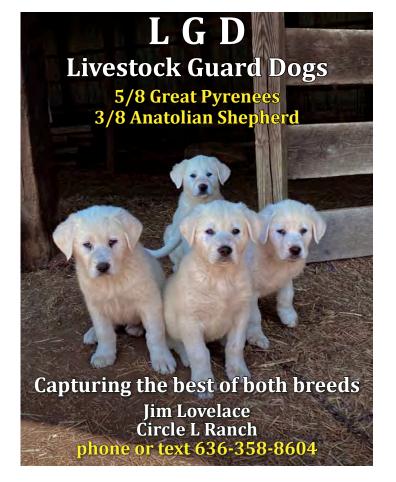

When you open Programs up you will see Articles and under Articles click on KHSI Video Instructions for a Virtual Hair Coat Inspection. After you have read this article and understand it right, below it is a short video on how to do a Virtual Hair Coat Video. Watch it and then proceed with your video.

KHSI Adds Two New Honorary Members

MARK DENNIS AND KHSI

I was born July 20, 1935 in Millville, New Jersey. I was raised on a small farm during World War II. I graduated from High School June 1953 and enlisted in the United States Coast Guard. My father and 3 uncles had made careers out of the Coast Guard, therefore, it was only natural for me to follow in their footsteps. I spent the next 22 years and retired as a Lieutenant in November 1976.

Sara and I moved to South Louisiana where I worked for the next 22 years in the Oil industry. We purchased a small farm and named it Country Oak Ranch. I became interested in livestock in 1986 and purchased my first Limousine Cattle. In 1987 I attended my first Hair Sheep Festival in Bethel, MÖ and saw my first Katahdin Hair Sheep from the Heifer Project in Perry, AR. While there, I purchased a Ewe and her twin ewes and made our way home.

The Cattle became less and the Katahdin Flock grew. The Katahdin Breed faired very well in the hot

weather here in New Iberia where we have green grass all year.

Lioined KHSI and attended all their annual meetings mostly held at the Heifer Project and the membership

Mark Dennis

grew substantially every year. The sales were very good for this breed.

I had the privilege to travel to Acapulco, Mexico with Dr. Charles Parker to attend the Mexico National Livestock Show in 1992. At that time, the Katahdin Breed was not known in Mexico, so we passed out brochures to educate those in attendance all about our Katahdin Hair Sheep. It wasn't long that the Mexican Breeders became very interested in purchasing Katahdin Sheep.

In 1996 the KHSI annual meeting was held in Lafayette, LA. I was elected to serve on the Board of Directors for 5 years. In 1999 I was elected President of KHSI and I was honored to serve for 1 year.

I could not fill all the requests for registered Katahdins for my Mexican friends. I thought if I could form a group of Katahdin breeders from LA., TX., and MS. we could sell more sheep to Mexico.

May 22, 1999, I held a gathering at Country Oak Ranch to officially form a KHSI Regional Group. We call our group South Central Katahdin Association (SCKA). Officers were

elected at this time. Mr. Frank Boggs was our editor of the SCKA News Letter and provided all members with valuable information concerning our Katahdins.

In January 2000 the border of Mexico was closed to all cattle, sheep,

SCKA Board of Directors chose to continue the Regional Group, and we developed our SCKA Website June 6, 2002. Once breeders began to hear about our group, we had breeders from OK., AR., GA., AL., and FL. Join. SCKA has moved forward due to hard work and active membership. We pro-

vide an annual Gathering on the 1st Saturday of June in Vicksburg, MS. We have Private Treaty Sales and recently we have had online sales. Now we have our own Facebook Page called Sheep Corner.

I have attended every KHSI Gathering/Expos since becoming a member except for 2 due to illness. I have attended the West Coast; Canada; and Mexico. I've served on numerous committees and have gained many long-time friends.

In 2013 I was presented a beautiful plaque from the Creadores Katahdin Breeders from Mexico that read, "Mark Dennis in Recognition for his early promotion of the Katahdin Breed in Mexico". I am told the Katahdin Breed is now the largest hair sheep breed in Mexico.

In 2015 I lost my wife Sara and thought that I was going to get out of the sheep business and move on,

but I put the word out that I was looking for a 70 year old hot chick, that didn't smoke, didn't drink (much), and didn't take any pills. You all know that Mickey Sue and I went to the same church and when I heard she was a nurse in charge of 5 nursing homes, I

knew I had to move fast.

Mickey Sue and I were married in Cookesville, TN Aug. 5, 2016 at the EXPO. I began to teach Mickey Sue all about sheep only to find out she didn't like to put her hands places inside a sheep or wash ram testicles. June 2022 we made the hard decision due to my age to sell our COR flock and prepare to downsize. We sold all our sheep to Vera Farms LLC in Sebring, FL. Pedro Velez, owner of Vera Farms, and his family have become great friends and are moving forward with aggressive ideas with the Katahdins.

Mickey Sue and I want to travel while we have our health and may show up at your front door one day. We'll stay until the food runs out and then we'll go to the next unsuspecting

As you can see, Katahdins have been my life for the past 35 years. We will continue to serve the Katahdin Family in any way we can.

CONTINUED ON PG 37

EST FORK

Over the last several years we have used sires with just over a thousand lambs combined from 8-9 flocks with proven GEBV's to increase the maternal accuracy within our ewes. Our continued focus will be to keep those maternal & growth traits and add parasite resistance to build ewes for the future while maintaining a moderate size ewe.

DAVE NOTTER'S IMPACT ON THE KATAHDIN BREED

Dave Notter has had 6 Katahdin specific efforts that have pushed Katahdins forward and allowed Katahdins to take their current position n leading the sheep industry in research that increases the productivity of Katahdins in commercial sheep flocks. Dave Notter has also greatly impacted Katahdins in two industry wide efforts that have helped all breeds that have taken advantage of his efforts.

Briefly,

- 1) Řeleased Katahdin specific adjustment factors and trait heritabilities in 2003.
- 2) Lbs. Lamb Weaned per Ewe EBV that became the Index. (First in the USA for any breed). Imitated work in 2002 and released in 2005.
- 3) Fecal Egg Count EBVs at Weaning and Postweaning (first in the USA). Work started in 2003 and released in 2007. In 2007, Notter combined the data from Kathy Bielek's SAE grants, Joan Burke's USDA Boon-

eville data, and the trial run Fecal Egg Count EBV work coordinated by Notter, Parker, Morgan from the flocks of Rodgers, Fahermeir and Morgan.

Dave Notter

Intellectually heavy work, by Notter of course.

4) Driver of the first Genomic SNP work that started in 2014. 96 Katahdin Sires with 10 progeny with

fecal egg count data

- 5) Oversaw the Quantitative Genetic Analyses of Dr Joan Burke's Organic Research (OREI) grant that evaluated
- a. the heritability of periparturient rise in Katahdin ewes (first breed in the USA). While there is no EBV for periparturient rise, Notter, Brrke and co-workers publication shows that selection of post weaning fecal egg count greatly impacts the periparturient rise.
- b. redid the heritabilities of Katahdin traits for growth, reproduction and resistance to nematodes.
- c. paper on heritability of FAM-ACHA in Katahdin lambs
- 6) The previous 5 points, laid a considerable portion of the foundation that resulted in the 2017 OREI grant to Joan Burke and co-researchers. This is the grant that led to the current release of Genomic Enhanced EBVs for Katahdins. While not as actively

CONTINUED ON PG 38

involved in this grant, Dave Notter participated in the discussions prior to the writing and submission of the grant and in the conference calls discussing the results

Much of the above was done without Katadhin financial support, USDA financial support or minimal support.

There are two industry wide (aka all breeds) efforts that without, Kathdins would not have Genomic Enhanced EBVs.

- 1) In 1998, the National Sheep Improvement Program no longer had the Hereford Association to do EPDs for the sheep industry. In 1999, Dave Notter agreed to do EBVs for the sheep industry. And the USA sheep industry still receives EBVs to this day.
- a. Did it with minimal financial support.
- b. First time that EPDs could be compared across flock. Prior to that, only within a flock
- c. Bottom line is that NSIP would not have existed after 1998 without Dave Notter.

We tried several times in the 2000s

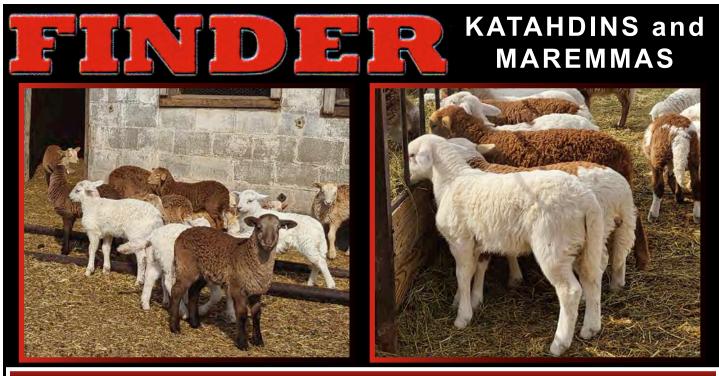

- to get USDA support at a fraction of the cost that USDA was spending on Dairy & Beef EPDDs or their support for quantitative genetics in the poultry and pork industries.
- 2) In 2009, Dave did a Herculean effort to convert all the NSIP data from all breeds into a format so that NSIP could transition to LambPlan. By 2010, most of the transition was done. Dave Notter continued to support the transition and help the USA sheep to better use our access the benefits of LambPlan until Ron Lewis became the NSIP Technical advisor.
- a. Australia had invested in a software and internet submission that allowed a sheep flock to run data 2x/month. This 2x/month run, greatly improved the value of NSIP for the USA Sheep Industry.

A few other notes:

1) All the efforts above that impacted Katahdins involved Katahdin breeders collecting data & DNA, data being partially organized by a Katahdin breeder. Take home is that he worked with Katahdin breeders.

- a. Dave Notter, Joan Burke and Ron Lewis have always said that there is a a grop of Katahdin breeders that will provide the data they need at a time in which USDA provides less monies for sheep research than for other livestock industries.
- 2) Almost all of the work, involved ideas suggested by Katahdin breeders for tools and information we could
- 3) Dave Notter's early work with the Katahdins, especially in the early 2000s helped give legitimacy to Katahdins in the whole sheep industry.

Spring lambs are looking good! We'll have ram and ewe lambs available after weaning.

OPPORT UNITY TO DONATE TO KATAHDIN YOUTH PROGRAMS

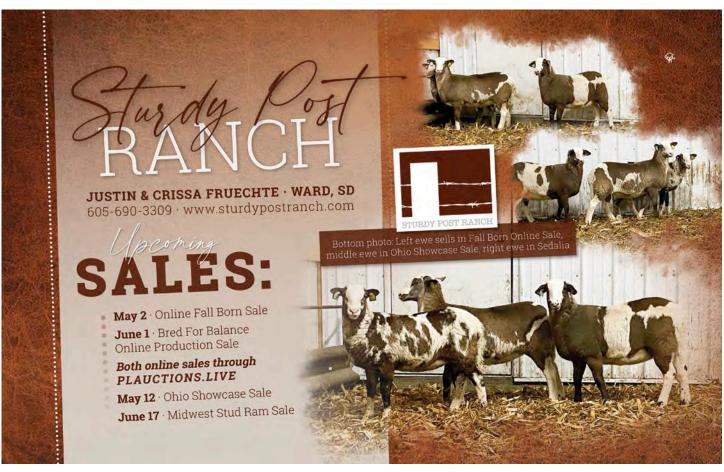

Donations are voluntary. With help from member donations of \$50 or more, KHSI has ben able to support several youth programs the past several years. Please donate to the youth activity of your choosing:

- Youth Scholarship Fund
- All American Junior Show (AAJS)
- Youth Show fund (covers Kennedy Family National Katahdin Junior Show and a few select regional youth shows, including Leroy Boyd Show, Midwest Junior Preview and Big E.

You can include your donations in your dues check. Please designate which fund(s) you want your donation to cover.

Contact KHSI Operations in Fowlerville, MI for more information if you have questions about donation opportunities.

KHSI Membership Donations to Support Youth Activities

63 KHSI members have donated a total of \$3364 to support this year's KHSI Youth Activities. These include the following:

- All American Junior Sheep Show
- Katahdin Youth Sheep Show
- KHSI Youth Scholarship fund

Please say thanks to the following contributors!

We will have a nice set of lambs available sired by 5 elite Katahdins acquired from flocks across the USA. Whether you are looking for ram lambs, ewe lambs, or replacement ewes we will have something to meet your needs in 2023. Come visit us on the farm or find us at the Midwest Stud Ram Sale in Sedalia, MO, KHSI Expo in Van Wert, OH, and other summer sales. We are also consigning to "The Rock 1st Annual Production Katahdin Sale" on June 6th. Follow us or the sale page on Facebook for information on our consignments.

www.kevinstewartkatahdins.com

I usually do a bit about the different types of systems that we use around the farm, but this article will be a bit different. I am going to venture into what I perceive as the taboo topic about the big D. It happens to every sheep farmer, except that one Facebook poster who says they haven't seen it and they've been raising sheep for 4 years. Well, good for them, but D day will come.

You can call it "lamb loss", "flock shrinkage", "lamb mortality", "lost a ewe" or just plain "Death". Or you can soften a bit by calling it "death loss", which I appreciate, as it pretty much says, "its gone, cause it died". I say that I perceive this as a taboo topic, as there seems to be very little personal discussion about this in a public forum. Yeah, you see FB posts about some gory stuff, but your not sitting in sessions where you gain comfort by knowing that others suffer some terrible losses, just like you may have experienced. Often I am sure that new shepherds wonder if anyone else ever had it this bad.

I was at an educational session where a person asked the question about their death loss and whether they were normal. The presenter quickly glossed over the question and pretty much ignored the question from what I heard. I realized then that I should bring this up some time and discuss it straight on. It feels like one reason to keep it to ourselves and under wraps is so we can sell more of these wonderful, "perfect" sheep. But they ain't perfect, and nor are we. This article will address a bit about the imperfect sheep, but I really want to bring out the mistakes made by the "imperfect we". Those mistakes that will make you cry, make you blame yourself, and may haunt you for a long time. If we can put it into proper perspective, we won't be haunted, but we will remember and be better educated from the experience.

It is hard to know where to start talking about death; almost like Shakespeare, "...let me count the ways". National statistics, across all breeds, show that nearly 10% of a lamb

crop perish early, and most before 7 days old. I've read that most lambs die from starvation. This is most likely not the case in smaller flocks where all lambs can be monitored every day and tubed or bottle fed. I don't want to get into the mechanics of tubing here, but I will say that I've heard that tubing is one of the greatest inventions to keep lambs alive. When we have a lamb that is identified as "at risk", we will try to get it to suck from a bottle, and tube it if it won't, then paint a bright red dot on its back. It is easy to spot in the crowd over the next few days and may need supplemented until you can no longer catch it. Sometimes 2 days and it is back nursing full time.

Obviously if we feel a newborn is not up to speed, we use colostrum; either store bought powder or frozen from what a ewe donated, and almost always this is tubed. Maybe from a ewe that had a still born (nice words for dead at birth (DAB)), or from a

CONTINUED ON PAGE 44

huge uttered ewe with a single or smaller twins. We freeze it flat in plastic Ziplocs. And if the lambs were just born, always watch for and remove the placenta, as sure enough, a lamb can be strangled by it.

Other things, like allowing a lamb to sneak out of a lambing jug and wander off may lead to death. Make sure the lambing jugs are escapeproof. However, this year we put a ewe with a nice single in a headgate so we could graft another lamb (whose mother died from severe mastitis which we found after her one triplet died of starvation) onto her. After the second night, I found the ewe had laid down on top of her own lamb and suffocated it. Looking at the pen, I realized that the side walls of the jug should have been slanted away from the head gate, allowing ample room for the lambs to get away from the ewe. Instead, the lamb couldn't escape and got pinched between the ewe and panel with no way out. That one still bothers me.

As the lambs get a few days old,

watch out for watery mouth, and learn to identify and treat it. This is frustrating, as they may look fairly fine, but are on the path to the flock in the sky. They can be saved if you have the right meds and it is caught in time, but I've not won that battle vet. Another killer that can affect the young lambs is anything that can fall on them - including the hay racks in the lambing jugs. We now use zip-ties to keep the ewes from unhooking the hay racks when they rub against them. And for Pete's sake, do not leave any panels leaning against a wall where a ewe can get between them and knock the panels over onto lambs... another one bites the dust. Tie all panels up if they must stay in the pen, but the best thing is to remove them or hang them up high.

Keep the bedding clean with good circulation or pneumonia may start to creep in. Be aware that there is a pneumonia vaccine, which seems to have mixed reviews, as how do you know if it really works? Not sure, but it is likely worth the investment. At a

certain age the lambs may start to get coccidiosis, which is just plain ugly. We used to think we were getting killed by worms, but found treating for worms was the wrong thing. We now get Deccox in our pellets that get fed to the ewes and then lambs through the creep feed. We've had some serious flock shrinkage in the past with pneumonia and coccidiosis.

As the lambs begin to grow there are other perils. Any place they can stick their head, they just might. They may flip over or break their neck trying to get free, and you will find them later as a shockwave of terror runs through your entire body. Yeah, they can be creative as to how they do it. I've twice had hay feeders in the field blow over and kill lambs. I took the well-intentioned roofs off so they don't get caught in the wind.

In the beginning we were using woven field fence for corrals and chutes. Great, low-cost - until a nice lamb gets its leg caught and broken,

THANK YOU to all our 2022 buyers for trusting in our genetics

and now it is my job to inflict the big D on the lamb if it is not going to heal well. Another time I've had to do that was when a new lamb just wasn't looking good, but he was plenty fat. When I went to give him an enema, I realized he didn't have a butt hole. Obviously, this didn't end well that evening.

A family member's dog got into the field... 7 lambs gone. A coyote was wondering through the area several years ago... unknown lambs gone. So we put up nice fencing with a good hot wire around the top to keep our lambs safe. We also put up netting to rotationally graze. The neighbor goes down the road on his Harley and I find 2 dead lambs in the morning... stuck in the electro-netting. We now use only poly wire along the roads where animals get spooked and try to never use netting on lambs. I had a ewe jump the netting - well almost. It snared her leg and sure enough, there she was the next day, no longer

The mature animals are the heartiest

by far, but they are not exempt to an early demise. The ewes are most vulnerable at lambing time. I had a vet pull a lamb "head back" and got a 2fer, as she killed the lamb and the ewe. I was new at it and now realize that shepherds often know more than vets about certain tasks and should step in when it is appropriate. And we've lost a few ewes to hypocalcemia and pregnancy toxemia. The key there is to recognize it early. Walk through the flock on a regular basis and make everyone get up and move. If in doubt, treat for both. And not just ewes, but we've had older rams blow out a hip or shoulder during breeding season. For this reason, have a backup ram ready.

I've also had my share of casualties from feeders – which is the most ironic. We use "tote cages" for cheap hay feeders. They worked great until a ewe decided to stick her head in the same opening as another ewe. It wasn't long until the bottom ewe suffocated. I now cut the third band from the top off of every cage and

am considering the bottom one as well. Another sheep-killing feeder are some lick feeders that I have. The first wave of mortality was due to a feed limiting bar being installed upside down by one of my helpers who cleaned them every day. This is an easy mistake to make and allowed free choice for a flock of ewes. Bloat took out 6 of them. The same feeders were used for a lamb creep situation where they were allowed to go empty. When they were refilled, the rams stuck their heads in to eat, other ram lambs piled in, tripping over each other, and snapping necks. Over half a dozen self-limited. (Hint: never let creep feeders go empty)

Since I can't take up the whole magazine, I'll end my tales of expiration and answer the question, "now what". Every time there is a death, there is the question of, "what do I do with it". Well, it all depends, and sometimes it takes a bit of preplanning. For instance, take the

with his progeny!
First daughters are
now in production

and making excellent mothers. His sons are big framed, fast growers. The ewe lamb pictured is the first Power Play to sell at public auction selected by Amilia Lillehaugen at the 2022 Expo National Sale.

In starting our flock a few years ago, we were fortunate to acquire a really top set of ewe lambs from David & Jane Smith, David Redwine, and Jay Greenstone.

Last year we decided to add some color to the flock and

purchased Great Northern at the 2022 Expo from the Lillehaugen family. Pictured is a Great Northern ewe lamb out of a Power Play dam. Lots of color, big bone, thick tops in the Great Northern lambs!

Watch for the progeny of these two leading sires at the 2023 Expo National Sale, Van Wert, Ohio

Mike and Hilda Jones, 19120 GA Hwy 219, West Point, GA 31833 706-773-3612 • mikejonesauctioneer@gmail.com

youngster this week that showed me what a rectal prolapse looks like (ok, so I lied – but just one more). I could have given her some pain medication, but I had an idea of where this would end, and that was in the freezer. So, what do we do with them?

The majority of our early demises go to the compost pile, as most are really small. We always have a big pile of organic material from bedding and such that we can use for composting. Google composting livestock if this is unknown to you. Do not throw them in your trash can. If they have certain medications or potential diseases, they must be buried deeply and properly in the compost. Sometimes we take them to the state lab for a necropsy and they dispose of them. The results of the necropsy can help us to learn why it died, but not always. Oh, and cut their tags off before burying.

We also eat some of our losses, but you must be prepared for this ahead of time. If you know why it died (suffocated in hay cage), then butchering is the right thing to do. They were some awesome legs and racks I cut up this week, which got me pretty excited. The rams with blown joints and the ewes with severe internal bleeding are freezer candidates as well. Do it yourself or call up a friend or custom butcher. Make the most of this bad situation. If you are going to do it yourself, watch some YouTube videos or have

a friend teach you. Have your supplies ready at all times, as you just never know when a sheep's tag # is up. Be cautious of the meat withdrawal times of any medications you gave the animal.

Idon't want to be too negative here, and please be aware that we have had thousands of lambs and hopefully few people ever come close to witnessing half of what I have. But when you have death, please be aware that you are not alone. When I sell sheep I often tell people that raising sheep is not perfect math. 1 plus I does not always equal 4. And remember, you can't count your lambs until they're on the trailer, and I've never had one die on the trailer...yet.

RMKA to Host 2 Events in 2023

By Babette Fief

The Rocky Mountain Katahdin Association is hosting two events in 2023. On June 3rd an educational meeting will be held in Albuquerque, NM. Then on June 8th and 9th our annual meeting will be held in Big Timber, Montana. Anyone is welcome to attend the meeting(s). Lunch is provided at both. The annual meeting will also include a private treaty ram and ewe sale. As more information on speakers and subjects becomes available it will be posted to our website and Facebook page. Anyone wishing to attend either event can register on the Rocky Mountain Katahdin Association website or by calling Babette at 719-468-0928 or Eleanor at 406-431-0184.

In 2022 we were hosted by University of Wyoming, Laramie's Drs. Whit Stewart and Cody Gifford who put on an excellent program for us. We learned carcass evaluation and latest trends for lamb retail cuts, we also did a blind taste test (hair sheep, most likely Katahdin, won). We learned results from a study on

mastitis and latest treatment options as well as touring the sheep barns and meat lab. Interesting that students in the meat lab have to come up with a recipe and some of the recipes go on to be featured in the American Lamb Board recipes. The five speakers had a lot for us to learn.

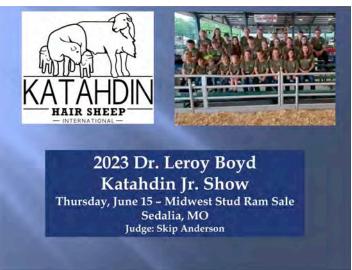

We learned about some of the sheep feed studies being done. Rocky Mountain Katahdin Association has

agreed to provide Katahdin lambs for upcoming studies.

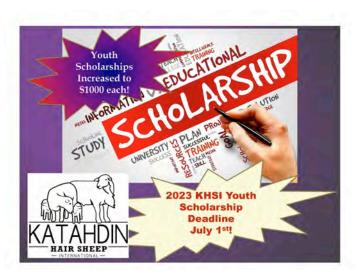

The RMKA board for 2023 consists of: Babette Fief, CO, president; Richard Blosser, CO, vice president Eleanor Molzahn, MT, secretary/treasurer and at large board Mendes are Ray Norris, WY and Gary Holyoak, ID

Katahdin Recipe Forum Part 1

Citrus Honey Glazed Lamb Shanks

Recipe by the American Lamb Board (https://www.americanlamb.com/recipes-2/)
Provided by Ful.Filled

4 tbsp honey

INGREDIENTS

FOR THE LAMB SHANKS: FOR THE CITRUS HONEY GLAZE:

4 American lamb shanks 2 tablespoons olive oil

salt, to taste

fresh ground black pepper, to

taste

8 cloves garlic

7 sprigs fresh rosemary

DIRECTIONS

1. Pre-heat your oven to 425°F. Place the lamb shanks in a roasting pan just large enough to fit them in one layer and rub with olive oil. Season shanks generously with salt and pepper.

juice of two oranges, about 1 cup

- 2. Roast for 20 minutes to achieve a nice brown color on the shanks. Remove roasting pan from the oven and turn the temperature down to 325°F. While you wait for the oven to cool down, scatter the garlic cloves and rosemary over and around the lamb.
- 3. Wrap the braising or roasting pan very tightly with several layers of heavy-duty aluminum foil and return to the oven.
- 4. Roast lamb shanks for an additional 2 hours. When the lamb is almost done roasting, mix the orange juice & honey until well combined. After 2 hours of roasting, remove the foil, spoon the citrus honey glaze over the shanks. Increase the heat to 400°F.
- 5. Roast shanks for another 15 minutes. Baste & rotate shanks, then roast for another 15 minutes. The lamb shanks are done when they are nicely browned and fork-tender. Note: USDA recommends an internal temperature of 145F with a 3 minute rest.
- 6. Transfer the lamb shanks to a serving platter and spoon over some of the juices, garlic cloves, and rosemary. Serve with roasted potates and a salad.

If you have a recipe that you and your family like, send it to KHSI Operations at info@katahdins.org or call 717-335-8280 ext 1.

We look forward to your recipes.

If your recipe is based on (or copied from) a published recipe, please provide the proper credit.

Katahdin Recipe Forum Part 2

Spiced Rack of American Lamb with Citrus Salad

Recipe by the American Lamb Board (https://www.americanlamb.com/recipes-2/)
Provided by The Original Dish

INGREDIENTS

2 American racks of lamb
(approximately 1 pound each)
2 teaspoons kosher salt, plus
more as needed
2 teaspoons ground cumin
1 teaspoon ground coriander
1 teaspoon ground cardamom
½ teaspoon crushed red pepper
½ teaspoon freshly cracked black
pepper, plus more as needed
6 tablespoons olive oil

2 blood oranges, peeled and segmented

1 orange, peeled and segmented

1 grapefruit, peeled and segmented

2 scallions, thinly sliced

8 mint leaves, torn

1 tablespoon white wine vinegar

1 tablespoon honey

1 cup greek yogurt

2 garlic cloves, grated

flaky sea salt (optional)

DIRECTIONS

For the Racks of Lamb: Preheat the oven to 450°F. Prepare a sheet pan with a baking rack on top. Place the lamb onto the rack, pat dry, and allow to sit at room temperature for 20 minutes. Meanwhile, combine the salt, cumin, coriander, cardamom, crushed red pepper, and black pepper in a small bowl. Add 2 tablespoons of the olive oil and stir to combine.

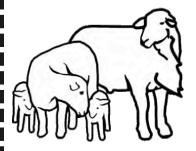

Rub the spice mixture onto the lamb, covering both sides of meat. With the bones facing down, roast the lamb for approximately 25 minutes (for medium), or until your desired doneness.

Remove the racks of lamb from the oven and transfer them to a cutting board. Loosely cover with foil and allow to rest for 10 minutes. Slice the racks between every two bones in order to create double chops. Plate the lamb with a drizzle of olive oil and flaky sea salt (optional) over top. Serve the citrus salad and yogurt sauce alongside (recipes below).

For the Citrus Salad: Combine the blood orange, orange, and grapefruit segments in a mixing bowl. Add the scallions, mint leaves, white wine vinegar, honey, and 2 tablespoons of olive oil. Stir well. Season with salt and pepper to taste.

For the Yogurt Sauce: Add the Greek yogurt, grated garlic, and remaining 2 tablespoons of olive to another bowl. Whisk to combine. Season with salt & pepper to taste.

- 2. I would like to purchase ASAP3. I am willing to pick up anywhere within Oregon or Washington

3/8/2023 SW OREGON

Wanted-Group of Katahdin or Katahdin cross ewes/ewe lambs. Expanding our operation and looking for a good group of Pacific NW sheep. Looking for 50-250. Jesse Lee – Winston, OR. (406) 231-8456

3/2/2023 NE OHIO

Looking to expand our commercial hair sheep flock with 50-300+ open Katahdin or Katahdin-Cross ewes (open to any age), would prefer to purchase a minimum of 50 head from within 300 miles (if possible). If shipping in from farther areas, would like to purchase a truckload, if possible. Not looking for culls, or any ewes with wool in their close background. Prefer to pay a fair price for good ewes. Will consider bred animals, but would depend on pricing. Ideally we would love to purchase open ewe lambs that were born in Fall of 2022. RC LIVESTOCK, LLC - Wooster, Ohio (330) 749-7793 jrams925@yahoo.com

WANTED TO BUY

1/31/2023 NW NEW YORK

Looking for a RAM for my flock. Must be registered, RR, TMEM154 4,4 or 1,1, 1,4, with current negative results for OPP, Johnes, and brucellosis. From a health-tested flock with no CL, foot rot, ORF, lice, or mastitis. Must be calm, easy-to-handle, gentle with ewes and lambs, slick-shedding, polled, good teeth, solid feet, and have a flat top line. Big and fastgrowing (minimum 90 lbs at 90 days on grass; 120/120 would be ideal), mature weight 300-350 lbs, and likes to eat. Grass-only flock preferred, but some grain or pellet supplement is acceptable as long as he has not been pushed hard. Color unimportant, age flexible as long as capable of breeding 20-30 ewes. Longevity, health, growth on pasture, parasite resistance, and good maternal milk are key factors. Will travel to pick up the right boy. Can wait a year if you are still using him, or pick up immediately. Budget corresponds to demands. This could be a perfect retirement situation for an older ram to live out his life in a pastured flock, but I won't dismiss a quality yearling either. Thank you! TIM Farms - Spencerport, NY (585) 694-0337, jktczh@me.com

SHEEP FOR SALE

3/28/2023 NW NEW YORK

SHEEP FOR SALE

2/1/2023 E KENTUCKY

We are selling our herd Ram Stu this year. He is a beautiful 2.5 year old all white ram. Our farm is a 100% grass fed operation, and he is used to electric fences, and moving daily. He is very gentle and can be pet most days. He has provided our farm many great twins and the growth of his lambs has always surpassed the other rams we had on site. The only reason we are selling is because he is unable to mate with to high of percentage of ewes on our farm. Pictures available upon request, I can't see a place to upload on this site. We are asking \$1200. Genesis Family Farm - Olive Hill, KY (434) 282-7998 genesisfamilyfarm@ gmail.com

1/30/2023 SW MICHIGAN

Five year old registered Katahdin ram BAG 3302. Percentage: 100.00. Codon 171:QR \$400.00 Greenfield Grazing – Buchanan, MI (269) 697-0063 efmacdonald92@gmail.com

1/30/2023 NW ARKANSAS

Ewe lambs and ram lambs born March 2023 for sale. Parasite resistant flock developed with the assistance of the University of Arkansas Parasitology Department for 20+ years. I have been a mixed animal veterinarian for 39 years, and have raised sheep for 35+ years. Ewe lambs and Ram lambs priced at \$600. If you are interested, please contact me early and a deposit will hold your lamb. Choice of lamb is dependent on date of deposit.
